Contract

Complex MDUs

Scope of Works

On behalf of its client Westpac, Spark needed a connection to the Ultra-Fast Broadband (UFB) in the IBM Data Centre at Manukau.

The scope of works was to enable the IBM Data Centre to be UFB-ready and included hauling of fibre cable from the street network to the connection room in the Centre along with running cables and installing fibre splitters and associated equipment in the Data Hall.

Spark had an urgent cutover planned for Westpac inside the Centre which would have been impossible to meet had we waited until the completion of the Centre. The way UCG planned the job was to construct all in-building cabling and connect Westpac to the UFB during the construction of the Centre - which worked really well in the end.

Client/Customer Comments

“I just wanted to say a big thank you to you both for the exceptional delivery of this circuit. Spark is so appreciative of the passion that was shown and the exceptional outcome delivered and wanted me to extend the appreciation to you both. Keep up the good work and thank you so much.”

Shareen Ali, Snr Service Delivery Manager
